

Dear Parents,

Lice have been detected at the school.

Lice spread very quickly, especially at school because children are in close contact with each other. It is important that we work together to control this problem.

What to do

1. -Check all your family members as soon as possible.
-Head lice can be quite difficult to see because they are very small and move very quickly. The best way is to use a fine toothed comb.
2. -Divide wet hair (towel dried) into several sections.
-Work on one section at a time. Place the teeth of the comb through as close as possible to the scalp and comb it gently throughout the hair to the ends.
-After each comb through,, wipe the comb on a tissue to see if there are lice.
3. -Repeat until you have checked all the hair, or until you find a louse.

If you find lice

- Buy a head lice treatment as soon as possible.
- Treat all infested family members the same day. Carefully follow the instructions indicated on the product.
- Change the sheets and clothes and wash them at 60 ° C.
- Disinfect any washable items, or items which have been in contact with infected people, with a special product (brushes, combs, seats, helmets, toys or plush fabric ..)
- Inform all people who have been in close contact with your children over the last two weeks.
- Some treatments against head lice must be used more than once because they kill the lice, but not necessarily the nits. Read the product instructions and apply the second treatment when indicated.

If you do not find lice

To control infestations of lice, we must carry out regular checks. Try to do this check every week.

To prevent an infestation:

- Tie back long hair
- Tell your children not to exchange clothing (hat, scarf, coat ..), combs or brushes with their friends
- Tell your child to wear a bathing cap in the pool

If you detect lice, it is important to treat the infestation as quickly as possible to stop the spread of lice.

Thank you for your understanding.
